## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4, and 41-42 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No. 6,089,977 to Bennett. Bennett teaches a housing having a display device (Fig. 1) for displaying a plurality of game elements in a grid having a plurality of cells defined by rows and columns (Fig. 1 ref. 42-43); a memory device for storing a pay-table (1:61-64, “the game machine”); and a game controller coupled to the display device and the memory device (1:61-64, “the game machine”), the game controller being adapted to randomly select the game elements to be displayed in the display device (1:61-66), the selected game elements being selected from a set of possible game elements (1:61-66), and to determine an outcome based on the displayed game elements (1:64-66), a pay-table, and predetermined pay lines (3:1), wherein the set of possible game elements includes a bonus element (2:1), and wherein the game controller is adapted to identify the presence of the bonus element in one of the cells of at least one column (2:1-6) and to modify all of the symbols within the column to wild if a wild character in any one cells of the column would modify the outcome (2:1-6 and Fig. 3). Figure 3 denotes a possible path of the wild symbol, wherein a possible path includes one column where all symbols would be changed to represent a wild symbol (2:1-30).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bennett as applied to claims 1, 4, and 41-42 above, and further in view of US Patent No. 6,251,013 to Bennett ("Ben2"). Bennett teaches the claimed limitations as described above, but does not teach the specific animation of an enemy breathing fire on a column to symbolize symbol changes nor a graphic of a jewel for a bonus element. However these features are not deemed critical to the operation of the underlying game functionality. Applicant's use of jewels and fireballs are merely thematic changes that don't affect a game's outcome. In the case of Bennett, the animations used are icebergs and penguin symbols featuring a particular theme. As such, modifying the characters used for animation purposes are seen as obvious equivalents to Bennett's iceberg and penguin symbols. As further evidence of thematic variety in gambling games Examiner points to Ben2, which is a similar gambling game machine (Fig. 1) that uses an animation of a sprite (Figs. 2-10b) to invoke a bonus mode where a sprite "changes" currently displayed symbols into other symbols including a wild card symbol (4:1-5:24). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Bennett to use any various symbols or animation to represent symbol modification.
